OBJECTIVE

Aspiring Data Analyst and B.Tech Information Technology undergraduate with strong foundations in SQL, Python, Data Science, AI/ML, Full Stack Development, and emerging LLM/Generative AI technologies. Passionate about designing scalable data workflows, transforming raw data into actionable insights, and building intelligent systems that bridge data engineering with machine learning and automation. Seeking internship and entry-level opportunities to apply analytical, technical, and problem-solving skills in real-world data ecosystems while growing into a high-impact data professional.

TECHNICAL SKILLS

Programming & Query Languages:	Python, SQL, PHP, JavaScript
Data Science & Analytics:	NumPy, Pandas, Seaborn, EDA, Data Cleaning, Data Visualization, Predictive Modeling
Data Engineering Concepts:	ETL Fundamentals, Database Management, Workflow Automation, Structured Data Processing
AI / ML & Emerging Technologies:	Machine Learning, NLP, OpenCV, LLM & SLM Fundamentals, Generative AI, RAG
Web & Full Stack Development:	HTML, CSS, JavaScript, Node.js, SQLite, Full Stack Development Fundamentals
Tools & Platforms:	GitHub, Streamlit, Ollama, n8n, VS Code, Colab

EDUCATION

B.Tech – Information Technology	2023 – 2027
B. S. Abdur Rahman Crescent Institute of Science and Technology, Vandalur, Chennai	
CGPA: 8.2	
Higher Secondary (12th)	80.9%
Secondary (10th)	65.5%

INTERNSHIP EXPERIENCE

Full Stack Development Intern – e-Soft IT Solutions Jun 18 – Jul 18, 2025

- Completed internship training in Full Stack Development, gaining practical exposure to frontend and backend web development fundamentals.
- Built foundational understanding of scalable web application workflows and software development practices.

Data Science Intern – Rinex Technology Jan 04 – Mar 04, 2026

- Completed an intensive Data Science internship focused on Python, NumPy, Pandas, Seaborn, Machine Learning, NLP, Object Detection, and Generative Models.
- Applied exploratory data analysis and predictive modeling techniques through projects including Titanic Analysis, IMDB Analysis, Spam Detection, Car Price Prediction, and Wine Quality Prediction.
- Strengthened practical understanding of data preprocessing, model building, and AI-driven problem solving through hands-on implementation.

PROJECTS

FlowRoute – AI-Powered Smart Navigation System

Developed a hackathon-winning AI-powered navigation platform using real-time traffic, GPS, and predictive analytics to deliver personalized, fuel-efficient, and eco-friendly route recommendations. Designed intelligent routing workflows focused on reducing travel time, fuel costs, and carbon emissions through data-driven optimization.

CodeForge AI – Local AI Code Generation Studio

Developed a local AI-powered code generation platform supporting 12+ programming languages with debugging, optimization, and code analysis features.

Integrated Ollama-hosted LLMs to build a privacy-first developer tool with code execution, complexity analysis, and version history.

DotedOn – Freelance UI/UX Design Project

Completed a freelance UI/UX project for DotedOn by designing a full user-centered interface in Figma based on client requirements. Applied modern design principles to create a professional, visually engaging, and functional website experience.

Passport Photo Face Detection System using OpenCV

Built a computer vision project using OpenCV and Haar Cascade classifiers for face detection with image preprocessing, grayscale transformation, and edge detection.

Implemented structured image-processing workflows including resizing, rotation, blurring, and feature extraction for automated visual analysis.

ACHIEVEMENTS & CERTIFICATIONS

- **1st Prize Winner – Hack-A-Root '25** – Secured first place in a competitive technical hackathon, demonstrating innovation, problem-solving, and high-impact technical execution.
- **LLM & SLM Value Added Course** – B.S. Abdur Rahman Crescent Institute x Yellowmatics.ai
- **GenAI for GenZ Workshop** – Skill and Personality Development Programme Center, B.S. Abdur Rahman Crescent Institute
- Built advanced independent projects in **LLM, RAG, AI Automation, Computer Vision, Data Science, and Full Stack Development**, showcasing strong initiative and technical capability beyond academic coursework.
- Designed AI-powered automation workflows for email operations, calendar scheduling, and Telegram conversational agents.
